3. Architectural QA Takeaways & Readiness

Key Takeaways for WordPress Production Rollout:
1. Personalization Integrity: The system reliably synthesizes customer profile data (past coaching notes, purchased courses, attachment styles) when matching user records are present.
2. Guardrail Enforcement: The unowned course filter ensures existing students are never repitched items they have already paid for, preserving brand trust.
3. Operational Separation: The clinical lane strictly resists commercial contamination, while the sales lane introduces courses only after delivering comprehensive relationship guidance.
4. Deployment Status: The core RAG pipeline is fully verified and ready for WordPress frontend embedding via POST /api/v1/ask and POST /api/v1/sales/ask.
